## Visit Track®

Visit Track is enterprise level security management software that offers many powerful tools to manage the flow of people in an organization in a secure and efficient way. It is available in Standard, Professional and Enterprise editions each serving a specific need in the area of security management.

## Visit Track® Standard

Visit Track Standard edition is a desktop version of our security software for visitor management. The system captures relevant details pertaining to visitors and issues a computer generated visitor badge with a photograph of the visitor and an unique bar code.

## Visit Track® Professional

Visit Track Professional edition is a web enabled version of our security software for visitor management that can be deployed across the corporate intranet. It offers all the basic features of the standard edition and many other advanced features related to security management.

## Visit Track® Enterprise

Visit Track Enterprise edition is a customized security software solution for visitor management that can be deployed at an enterprise level. The application uses the core data model and concepts of our Visit Track and takes an enterprise wide look at security management.

## Reasons To Consider

Security has become a growing concern for all of us these days. In the present environment there is definitely a need for all organizations to implement an efficient security management system that monitors the flow of people entering or leaving their facility and act upon system generated alerts when security is compromised.

## How does it Function?

Visit Track maintains a database with a digital image and relevant details of all people authorized to enter your facility. It allows users to create specific appointments for visitors over the intranet/internet.

The person entering the facility is issued a badge with their photograph and visit details. Once the visitor badge is issued, a unique process of time stamping ensures that the visitor's identity movement is monitored at the control terminal.

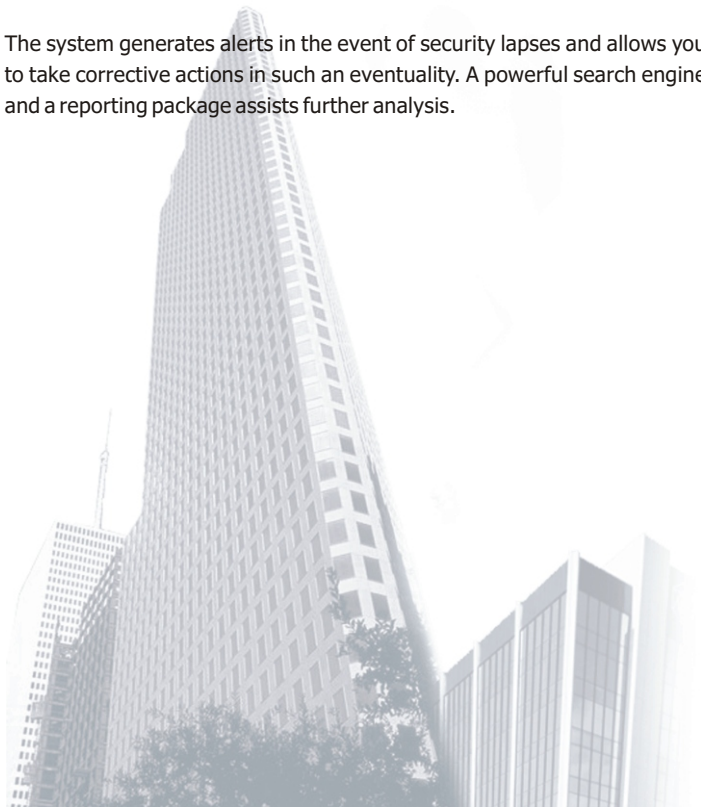

The system generates alerts in the event of security lapses and allows you to take corrective actions in such an eventuality. A powerful search engine and a reporting package assists further analysis.

## Modules

Visit Track is available with the following additional modules and sub-systems. These can be used as stand-alone systems or as add-ons to the main application. These modules are designed to meet the security requirement of a specific event or activity.

Modules and sub-systems:

- Events Management
- Employee Identification
- Automated Visitor Entry & Time Stamping Solution
- Material Identification
- Vehicle Identification
- Keys Management
- DL/ Magnetic Card Reader Interface
- Business Card Reader Interface
- Web Based Photo recognition Module
- Integrated Solutions with Existing Access Control Systems

## Advantages

- Improves Safety and Security by establishing a process of identification, control, monitoring and analysis of people (visitors) entering and leaving your facility or events.

- Saves Organization's Time and Money by eliminating executive time spent on setting up appointments for visitors.
- Improves the visitor management process by automating the current system used for visitor badges.
- Provides a database of all visits for future analysis through a powerful search engine and a reporting tool.
- Enables organizations to take corrective measures in the event of a security lapse through a system of online alerts.
- Web enabled application that can be deployed enterprise wide with no significant investments in hardware / software - Simple, Scalable & Cost Effective Solution.

## Product Features

- Digital Imaging and Bar Code Authentication
- Can be deployed enterprise wide
- Online alerts generation
- Powerful data snuffer algorithms
- Emergency blocking facility
- Time-stamping facility
- Web based appointment scheduler
- Web based security bulletin board
- Boolean Search Engine
- Data mining and Reporting Tools

## Applications

- Security Management at Facilities
- Security Management at Events
- Personnel Identification & Badging system
- Vehicle Identification system
- Material Identification system
- Special Projects involving integration of various security systems

## Comparative Study

Visit Track offers many useful features in comparison with existing Visitor/ Event Management Systems, the chart below illustrates some of the key features:

| PARAMETER              | EXISTING SYSTEM    | WITH Visit Track       |
|------------------------|--------------------|------------------------|
| Process                | Manual             | Computerized           |
| Operation              | Slow               | Fast & Efficient       |
| Cost                   | Wastes Time & Cost | Saves Time & Cost      |
| Reliability            | Poor               | High                   |
| Security Level         | Very Low           | Very High              |
| Alerts Generation      | Absent             | Present                |
| Emergency Blocking     | Absent             | Present                |
| Data Mining Facility   | Absent             | Excellent              |
| Tracking               | Not Possible       | Possible               |
| Appointment Creation   | Not Possible       | Possible & Web enabled |
| Appointment Diversion  | Not Possible       | Possible & Web enabled |
| Bulletin Board         | Absent             | Present & Web enabled  |
| Time Stamping          | Not Possible       | Possible               |
| Identification Process | Manual             | Digital & Permanent    |
| Overall Value & Rating | Low                | Very High              |
